             hybrids have enhanced fibrin selectivity as well as kinetics of plasminogen activation that are distinct from that of natural streptochiases in being characterised by a temporary delay, or lag of several minutes in the natural rate of the catalytic conversion of plasminogen to plasmin (i.e. delayed-action thrombolysis). The proteins can bind tightly with fibrin in blood clots soon after introduction into blood plasminogen to plasmin, thus significantly activating the circulating blood plasminogen activation process to the site of pathological thrombus. This overcomes systemic plasminogen activation ectivation encountered during clinical use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Proteins with cell migration stimulatory activity used in treating wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. The present sequence represents the human fibronectin
thrombolytic therapy for various kinds of cardiovascular disorders. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Migration stimulatory factor; MSF; cell migration; modulation; human; wound healing; scarring; MSF1-alpha; epitope; fibronectin.

                                                                                                                                                                                        Human fibronectin (AAR92778) has a fibrin-binding site, close to the C-terminus (amino acids 2123-2232 or 2141-2230), covering the 10F1.11F1 module pair of the protein. Fibrin-binding sites can be prepd. by enzymatic cleavage of fibronectin, peptide synthesis or by recombinant DNA techniques. They are used to detect a fibrin-binding target site, to treat disorders involving abnormal fibrinolysis or fibrinogensis, to disrupt blood clots and to aid delivery of medicaments to fibrin- contgines. They show high affinity to and slow dissociation from fibrin, and

The invention relates to obtaining a population of quiescent haematopoietic cells (HG), comprising culturing HC while adhering the cells to a pollypeptide having a very late antigen-4 (VLA-4) binding site, in particular fibronectin polypeptide, so as to expand the number of HC. Where the adhering provides an increased percentage of quiescent HC. Also included are inducing apoptosis of a subpopulation of HC, by contacting the cells with a polypeptide having a VLA-4 binding site under conditions to cause apoptosis of a subpopulation of HC and a medium for culturing HC which enriches quiescent HC, comprising a fibronectin polypeptide. The method is useful for obtaining a cell population containing quiescent haematopoietic cells which are useful for treating a subject. Use of the VLA-4 containing peptide is useful for inducing apoptosis of a subpopulation of CD34+ HC population. The present sequence is human fibronectin which contains then VLA-4 binding site used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modulating proliferation of erythroid progenitor cells in a hematopoietic cellular population by culturing with polypeptides containing an integrin very late antigen 5 or 4 binding site, useful in treating erythroid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for enhancing proliferation or inducing apoptosis of erythroid progenitor cells (EPCs). The method involves culturing haematopoietic cellular populations containing EPCs in the presence of a polypeptide having an integrin very late antigen (VLA)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, proliferation, apoptosis, erythroid progenitor cell; EPC, VLA, integrin very late antigen, haematopoietic cell; induced disorder; genetic disorder; congenital erythroid disorder; polycythaemia; anaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
use in treating a subject, by expanding the cells while adhered polypeptide containing binding sites for integrins on the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .;

5 or VLA-4 binding site. The EPCs are useful for treating patients having induced, genetic or congenital erythroid disorders. Methods of the invention are useful in diagnostic assays of progenitor cells, e.g. cells occurring in pathologic states such as anaemia or polycythaemia and in the study of erythroid cell development. They are used in the screening of agents which inhibit or prevent apoptosis of erythroid cells. The present sequence is a human protein related to the modulation of prolliferation of EPCs. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The product may be expressed from a transformed micro-organism, esp. E.coli. FN binds to fibrin, heparin and Staphylococcus aureus, and may be used to target a therapuetic agent onto natural fibrin eg. a blood clot. It may also be used in affinity purification of a polypeptide, conjugated to the collagen binding site of FN and immobilised on a collagen surface. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New fibronectin polypeptide sequence with affinity for collagen etc. - useful for targetting therapeutic substances on natural fibrin, for use in affinity purificn. of polypeptide(s) etc.
                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; high bone mass; HBM gene; Zmaxl gene; chromosome 11; 11q13.3; sequence tagged site; STS; osteoporosis; osteopathic; gene therapy; antisense therapy; vaccine; bone disorder; Paget's disease; sclerostosis; osteomalacia; fibrous dysplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    derive polypeptides which are identical to part of the fibrin- binding domain (FBD) of fibronectin. These polypeptides can be used to inhibit thrombus formation, or (coupled to a thrombolytic agent) to induce thrombolytis agent, est to treat wounds, e.g. in skin, eyes or tendons (in conjunction with a polypeptide which includes a part of the cell-binding domain (CBD) of fibronectin). These polypeptides are easier to prepare than the full 31kD polypeptide. It can also be used to image fibrincontg. materials, esp. a thrombus or athero- sclerotic plaque, pref. using a gamma counter. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The amino acid sequence is that of human fibronectin, this can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                              New fibrin binding domain polypeptide(s) - useful in imaging fibr:

The invention describes genes (1) which are differentially regulated in prostate cancer. (2) Is useful for diagnosing a prostate cancer in a semple comprising prostate tissue, which involves determining the number of target genes which are differentially-regulated in the sample, where to target genes which are differentially-regulated in the sample, where to prostate cancer. (3) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves contention in a subject having a prostate cancer. Which involves contenting the expression levels in a sample comprising prostate cancer. Preferably, the expression levels of at least 10 genes are determined. (1) is also useful for identifying agents that modulate a biological activity of a polypeptide differentially-regulated in prostate cancer. (2) is also useful for identifying agents that modulate a biological activity of the polypeptide, and cativity of a polypeptide differentially-regulated in postate cancer. (2) is useful as molecular markers, as qual targets, and for detecting, the test agent to modulate a biological activity of the polypeptide, and determining whether the test agent modulates the biological activity. (1) is useful as molecular markers, as qual targets, and for detecting, products are used in the diagnostic test to assay for presence of concerned products are used in the diagnostic test to assay for presence of cancer (2), in tissue sections, in biopsy sample, in total NN, in lymph, in blood etc. (1) is useful for assessing cancer e.g., to determine the type of cancer, its stage of development, the nature of genetic defect, etc. (2) the polypeptide and thus activity of products are used in the diagnostic test to assay for presence of cancer (3), in therapeutic applications to reat pornate cancer. The identification of specific genes, and groups of genes, expressed in pathways which are useful in diagnostic, therapeutic, and clinical in therapeutic applications of genes are not prostate cancer. T
                                             Novel genes which are differentially regulated in prostate cancer, useful for diagnosing prostate cancer in prostate tissue sample and assessing therapeutic or preventive intervention in prostate cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; high bone mass; HBM; LRP5; LRP6; transgenic; bone mass modulation; gene therapy; bone density modulation; bone strength; trabecular number; bone size; bone tissue connectivity; bone disease; osteoporosis; osteomalacia; rickets; Paget's disease; neoplasm of the bone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  49

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes the human Zmax1 gene and the high bone mass (HBM) gene, which are found on chromosome 11q13.3. The Zmax1 and HBM genes have osteopathic activities. The genes and be used in gene therapy, antisense therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoporosis, the diagnosis and treatment of bone disorders including osteoporosis, ABAB2038 to ABAB2700 and AAG68193 to AAG68193 represent sequences used in the exemplification of the present invention

order in ABR22047 to ABR22164. A higher level of expression of (1) than normal indicates the presence of cervical cancer. Also described: (1) a vector (II) containing (I); (2) a host cell (III) containing (I); and (3) assessing (MI) whether a patient is afflicted with cervical cancer, comprising comparing the level of expression of a marker in a control nor cervical cancer sample, where a significant increase in the level of expression of the marker in the patient's sample relative to that in the control sample is an indication that the patient is afflicted with cervical cancer. (I) has cytostatic activity, and can be used in gene therapy and in vaccines. (I) is useful in detecting, characterising, preventing and treating human cervical cancers. (I) may also be used in monitoring clinical trials

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel transgenic animals expressing the high bone mass (HBM) gene, expressing the corresponding wild type HBM gene, comprising an alteration of the gene encoding LRPS or LRP6, or expressing an LRP5 that is modulated by an altered gene control sequence introduced by homologous or non-homologous recombination. The transgenic animals are for the study of bone density modulation or bone mass modulation. The invention may have a use in gene therapy. The transgenic animals and nucleic acids are for the study of bone density modulation, where the conceives in more than one parameter selected from bone density, bone aspecies in more than one parameter selected from bone density, bone strength, trabecular number, bone size, or bone tissue connectivity. The transgenic animals, nucleic acids and methods are useful for identifying molecules involved in bone development, and for developing pharmaceutical compositions, which may be employed for treating or preventing bone diseases, e.g. osteoporosis, osteomalacia, rickets, Paget's disease, or neoplasms of the bone. The transgenic animals and nucleic acids are also useful in methods for diagnosing diseases involved in bone development, or characterised by reduced bone density or mass. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó
                                                                                                                                                                                                                                                                                                                                                                                            New transgenic animals (e.g. mice), useful as models for studying bone density modulation, developing drugs for treating or preventing bone diseases (e.g. osteoporosis), or diagnosing diseases characterized by reduced bone density.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                The present invention describes a method (MI) for diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, or determining the prognosis or outcome of a cancer patient. Mi involves providing a set of genes that are differentially expressed in cancerous or non-cancerous conditions, determining the expression levels of the set of genes and calculating a ratio of the expression levels of the differentially capression levels of the differentially or non-cancer cells in a tissue sample, where the cancer is malignant pleural mesothelioma (MPW), lung adenocarcinoma, squamous carcinoma, prostate cancer, breast cancer, difficuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, difficuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, difficuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, difficator determining prognosis or outcome of a cancer patient. The ratio of expression levels cancer class, and/or cancer prognosis, and indicator of cancer type, cancer class, and/or cancer prognosis. The present sequence represents a human protein which is used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                            Diagnosing cancer cells in tissue sample, or determining prognosis or outcome of cancer patient, by calculating ratio of expression levels of genes that are differentially expressed in cancer and non cancer tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3

The present invention relates to High Bone Mass (HBM), LRPS (Zmax1) and LRP6 mutants, which results in a HBM-like phenotype when expressed in a cell. The HBM-like phenotype results in bone mass modulation and/or lipid level modulation. The invention is useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject suffering from e.g. osteoporosis. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Regulating LRP5, LRP6 or HBM activity in a subject, useful for modulating lipid levels and/or bone mass, and for in treating bone mass disorders, e.g. osteoporosis, comprises administering a composition which modulates a Dkk activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ne present invention relates to regulating LRP5, LRP6 or HBM activity in subject comprising administering a composition which modulates a Dkk
New nucleic acid comprising a mutation in LRP5 or LRP6, useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LRP5; LRP6; HBM; Dkk activity; Osteopathic; Antiinflammatory; Antiarthritic; bone mass disorders; osteoporosis; hypercalcaemia; hyperostosis; osteogenesis; Wnt signaling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

activity. The method is useful for modulating lipid levels and/or bone mass, and is useful in treating or diagnosing abnormal lipid levels and bone mass disorders, such as osteoporosis, bond fracture, age-related loss of bone, a chondrodystrophy, drug-induced bone disorder, high bone turnover, hypercalcaemia, hypercostosis, osteogenesis, imperfecta, osteomalacia, osteomyelitis, Paget's disease, osteoarthritis, and rickets. Modulators of Dkk activity are useful for as reagents in studying bone mass and lipid level modulation, in modulating Wht signaling, or treating Dkk-mediated disorders. The present sequence represents a human protein sequence related to the invention.

```

The invention relates to a method of diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, determining prognosis or outcome of a cancer patient, selecting a course of treatment for a subject having or suspected of having malignant pleural mesothelioma (MPM) and evaluating treatment of MPM comprising determining the ratio of the expression level of a set of genes differentially expressed in a cancer tissue. The cancer is chosen from MPM, lung adenocarcinoma, squamous carcinoma, medulloblastoma, prostate cancer, breast cancer, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer. The method is useful for diagnosing MPM in a subject suspected of having MPM which involves obtaining a tissue sample suspected of being cancerous

Diagnosing the presence of cancer or non-cancer cells in tissue sample, useful for diagnosing malignant pleural mesothelioma comprises determining ratio of expression level of a set of genes expressed in

GLU Y.-C., Talles J.F., Gullberg D., Timpl R., Ekblom M.;
Glucocorticoids down-regulate the extracellular marrix proteins fibronectin, fibulin-1 and fibulin-2 in bone marrow stroma.";
Eur. J. Haematol. 67.176-184 (2001).
-1- HAEMATON: Fibronectins fibrin, heparin, DNA, and actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell shape.
-1- SUBUNI: Mostly heterodimers or multimers of alternatively spliced variants, connected by 2 disulfide bonds near the carboxyl ends;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Talts J.F., Weller A., Timpl R., Ekblom M., Ekblom P.; "Regulation of mesenchymal extracellular matrix protein synthesis by transforming growth factor-beta and glucocorticoids in tumor stroma."; J. Cell Sci. 108:2153-2162(1995).

mouse fibronectin containing the RGD and synergy regions: comparison
with the human fibronectin crystal structure.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               οĘ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IsoId=P11276-1; Sequence=Displayed;
TISSUE SPECIFICITY: Plasma FN (soluble dimeric form) is secreted by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix.
INDUCTION: Glucocorticoids suppressed mRNA expression and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              to a lesser extend homodimers. Interacts with FBLN1 and LGALS3BP (By similarity).
                                                                                                                                                                                                                                                               Polly P., Nicholson R.C.; "Sequence of the mouse fibronectin-encoding gene promoter region."; Gene 137:353-354(1993).

Comment=A number of isoforms are produced. Each of the "extra
domain" and the connecting strand 3 are present in some forms
fibronectin and absent in others;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TISSUE=Kidney;

RE Gentification and characterization of alternatively spliced

RT flacentin mRNAs expressed in early Xenopus embryos.";

RL Dev. Biol. 149:357-369(1992).

CC -!- FUNCTION: Fibronectins bind cell surfaces and various compounds

CC including collagen, fibrin, heparin, DNA, and actin. Fibronectins

RC are involved in cell adhesion, cell motility, opsonization, wound

CC --- SUBMIT: Dimers or multimers of alternatively spliced variants,

CC --- SUBMIT: Dimers or multimers of alternatively spliced variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              similarity).
ALTERNATIVE PRODUCTS:
Event-Alternative splicing; Named isoforms=1;
Comment=A number of isoforms are produced. Each of the "extra domain" and the connecting strand 3 are present in some forms of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Xenopus laevis (African clawed frog).

-!- TISSUE SPECIFICITY: In early Xenopus embryo, cellular forms of fibronectin predominate which include both extra domains. In fibronectin of embryonic and adult liver the connecting strand can be either completely excluded or included.
-!- SIMILARITY: Contains 12 fibronectin type I domains.
-!- SIMILARITY: Contains 2 fibronectin type III domains.
-!- SIMILARITY: Contains 17 fibronectin type III domains.

Sequence 12, Application US/09016366A

Patent No. 595841

GENERAL INFORMATION:
APPLICANT: Stevens, Richard L.
APPLICANT: Stevens, Chifu,
TITLE OF INVENTION: MAST CELL PROTEASE PEPTIDE
TITLE OF INVENTION: INHIBITORS
NUMBER OF SEQUENCES: 65
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wolf, Greenfield & Sacks, P.C.
STREET: 600 Atlantic Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100.0%; Score 275; DB 6; 100.0%; Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
